REPORT FOR ENTERPRISE

ATTENDANCE CONTROL SYSTEM

Attendance Reporting for Enterprise

Streamlined Time Tracking & Reporting for Your Business

ACS (Attendance Control System) is an advanced attendance solution designed to help businesses and institutions manage attendance easily and efficiently. With a low initial budget, ACS enables you to reduce upfront investments without compromising on quality and comprehensive features.

This application offers high accessibility, allowing users to clock in and out anytime, anywhere, using iOS or Android smartphones or attendance cards. The admin page, accessible via the website, provides full control over attendance data, making management and real-time monitoring effortless.

With accessibility from any device, you don't have to worry about platform or hardware limitations. ACS delivers an efficient and flexible solution, so your business or institution can focus on what truly matters without the hassle of traditional attendance systems.

The Advantageto ACS

- Low Initial Budget
- High Accessibility
- Accurate and Efficient
- Real-Time Monitoring
- Seamless Integration
- Customizable Reporting

Concept Behind ACS

ACS (Attendance Control System) is built on a highly efficient data pipeline, ensuring seamless data collection, processing, and storage in real-time. The application integrates multiple components to provide accurate and reliable attendance tracking

Data Collection

Captures location coordinates and user ID (card, QR, fingerprint, face, palm) for precise, convenient attendance tracking and management

Middleware Processing

D2SS ensures secure data transfer; ASWA uses AI for analysis and accuracy; DAS manages secure data access requests

Data Storage

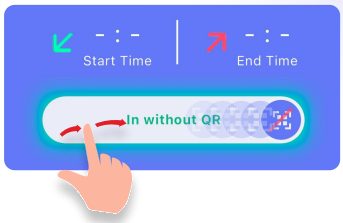
Processed data is stored in MongoDB, providing scalability, efficient management, and smooth system performance as it grows

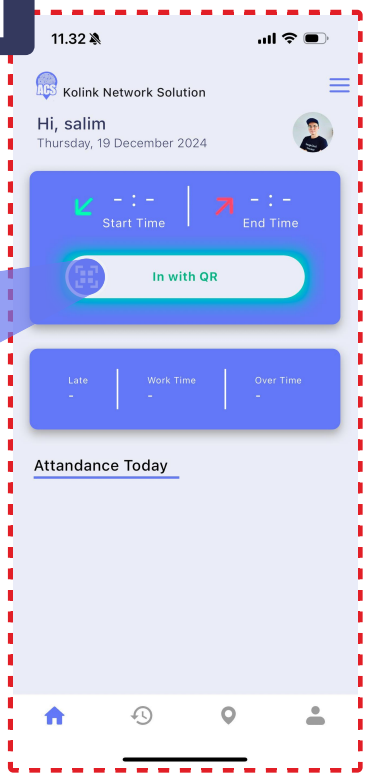
Mobile App Feature

1

The home page displays your work duration, late arrivals, and overtime, along with clock-in and clock-out times. A button allows seamless attendance tracking via QR scanning, ensuring secure and accurate logins directly from the main screen

The Scan with QR feature validates location, allowing clock in and out within the designated radius for secure attendance tracking





The home page also offers the flexibility to log in without using a QR code, allowing attendance tracking even outside the predefined location radius. This ensures accessibility and convenience for users in various circumstances, maintaining accurate records regardless of their location

2

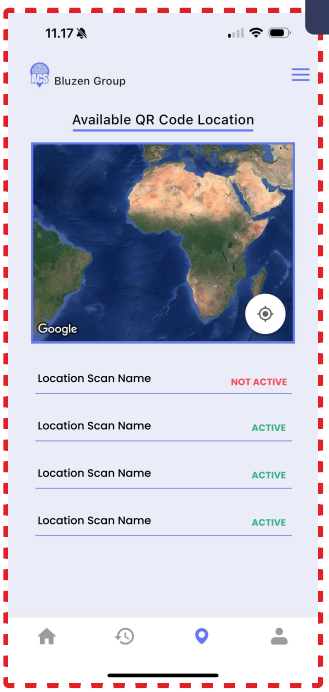
On the History page, you can view your attendance records with filters for "Previous Month," "This Week," and "This Month." These filters show clock-in/out times, late days, workdays, and overtime. Additionally, a date selection button at the top lets you choose a specific range, leading to a new page for detailed data

Available on the App Store

3

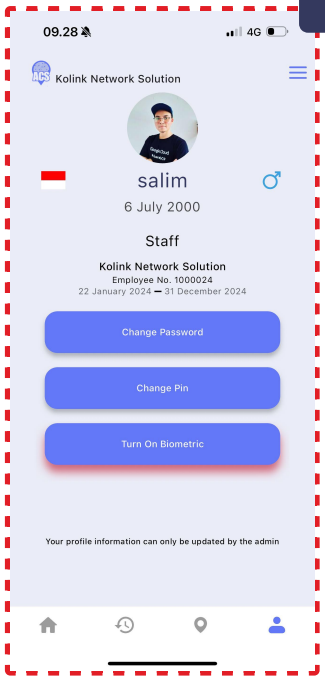
The QR Code attendance feature requires camera access to scan the code for clocking in and out. On this page, you'll be prompted to grant permission for the camera to capture the QR Code. Scanning the code records your attendance, ensuring an easy and secure way to track your time

4



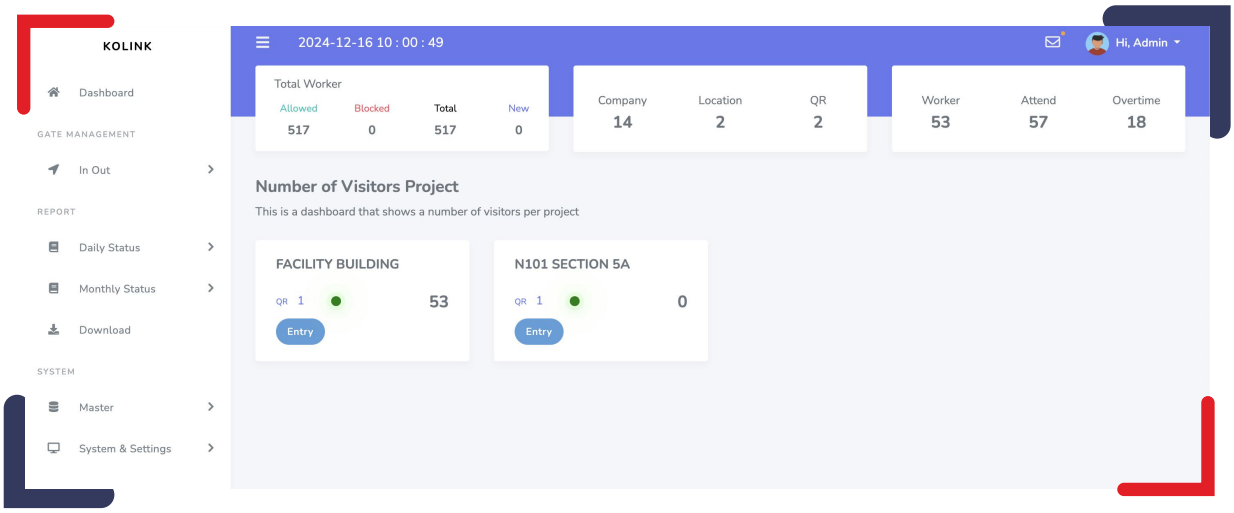
Location screen, you can view a list of active QR locations with a customizable attendance radius. The green building icon marks the QR location, the red circle shows the attendance range, and the red pin represents your current location. The radius can be adjusted through the admin dashboard

5



Profile screen, you can view and update your profile details, change your password or PIN, and enable biometric authentication. Once biometrics are activated, you can skip entering your PIN on the PIN page and directly access the home page using your biometric credentials for faster, secure login

Website App Feature



Centralized dashboard for attendance monitoring, real-time insights, simplified multi-location tracking, efficient management, user-friendly interface, streamlined workforce data handling

Real-Time

Displays total workers and attendance status and Identifies late employees and tracks attendance trends

Centralized Monitoring System

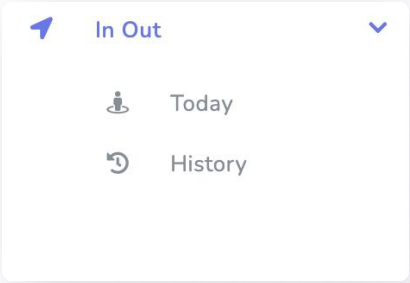
Enables oversight across multiple company locations and Simplifies attendance tracking for large enterprises

User-Friendly Interface

Clear and organized design for effortless navigation and Streamlines workforce data handling across locations

Efficient Management

Comprehensive view of workforce activities and Facilitates quick decision-making with actionable data



In Out Menu

Logs daily movements with Worker ID, Name, Location, QR entry/exit, enabling accurate, real-time, and streamlined attendance tracking

Daily Status Menu

Logs daily movements with Worker ID, Name, Location, QR entry/exit, enabling accurate, real-time, and streamlined attendance tracking

Monthly Status Menu

Monthly insights: By Company (attendance, work hours, trends), By Worker (performance insights), By Location (attendance comparison, efficiency improvement)

VARIABLE TYPE REPORTING

Comprehensive Reporting for Users and Companies

TRANSFORM ATTENDANCE WITH TECHNOLOGY

Enhance your business operations with our innovative Attendance Control System. Simplify attendance tracking, improve accuracy, and access real-time reports with ease. Reach out today to discover how our solution can drive efficiency in your workforce managemen
